

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Investigating

Ticket comments
5 W's: WHO: The employee that opened the email and downloaded the suspicious file WHAT: Employee received a phishing email with a malicious attachment WHEN: July 20th, 2022 WHERE: On the employee's workstation inside the company's network. WHY: The phishing attempt was convincing enough for an employee to believe it is real. Determine action: Escalate the ticket. The file has already been confirmed to be malicious. That alone is enough to escalate, because it's not a false positive. Phishing alert triggered by a malicious email attachment; the attached file hash was verified as malicious • "The email contained an attachment that matched a known malicious SHA256 hash." • "The alert severity was High, indicating elevated risk." • "Given the confirmed malicious file, escalation is required for remediation and further investigation." Final ticket status: Escalated

Additional information
