You're the first cybersecurity professional hired by a growing business.

Recently, a deposit was made from the business to an unknown bank account. The finance manager says they didn't make a mistake. Fortunately, they were able to stop the payment. The owner has asked you to investigate what happened to prevent any future incidents.

To do this, you'll need to do some accounting on the incident to better understand what happened. First, you will review the access log of the incident. Next, you will take notes that can help you identify a possible threat actor. Then, you will spot issues with the access controls that were exploited by the user. Finally, you will recommend mitigations that can improve the business' access controls and reduce the likelihood that this incident reoccurs

Notes: The event log stated that the IP: 152.207.255.255 was used. This comes from an employee, Robert Taylor Jr., who is a legal attorney. He is a contractor and only supposed to be with the company for about 4 months from 9/4/2019 - 12/27/2019. This event occurred at 8:29:57 am (5 days ago) on Date: 10/03/2023 . Used a device with name Up2-NoGud which should correlate to the IP for Robert Taylor Jr.

Issue: The user has admin access. He was only with the company for a short time period but that was years ago from today's current date of 10/0/2023. Their account should not still be active but for some reason they still have admin privileges.

Recommendation:

Before anything we need to revoke admin access from Robert Taylor Jr. and terminate his account permanently. After contractors and employees are let go or move on from our company there needs to be stricter security protocols in place. We must wipe employee computers, and revoke access to any privileges that they may be given during the time of their stay at our company.
